

August 30, 2005

Intervet Canada has announced two new product approvals for the Canadian market.

Argus® SC/ST

Argus® SC/ST is an avirulent live vaccine that targets *Salmonella choleraesuis* and *Salmonella typhimurium*. It has been approved as an aid in the prevention of pneumonia, diarrhea, septicaemia and mortality caused by *S. choleraesuis*, and aids in the control of disease caused by *S. typhimurium*. *Argus® SC/ST* also controls the shedding of *S. typhimurium*, a common cause of salmonella poisoning in people.

Argus® SC/ST is an oral vaccine with a 21-day withdrawal period (at label dose) intended for use in animals greater than three (3) weeks of age.

Producers interested in the use of this product should consult with their veterinarian for more specific information.

Regu-Mate® Solution 0.22%

Regu-Mate® Solution 0.22% contains the active synthetic progestin known as altrenogest. In swine, this product has been approved for the suppression of estrous in sexually mature gilts.

This is an oral medication with a withdrawal period of 42 days (at label dose) intended for use in sexually mature gilts.

Producers interested in the use of this product should consult with their veterinarian for more specific information.
